

Infrastructure Investment

Federal Investment would restart green-lighted projects immediately — fueling our economic recovery and putting America back to work.

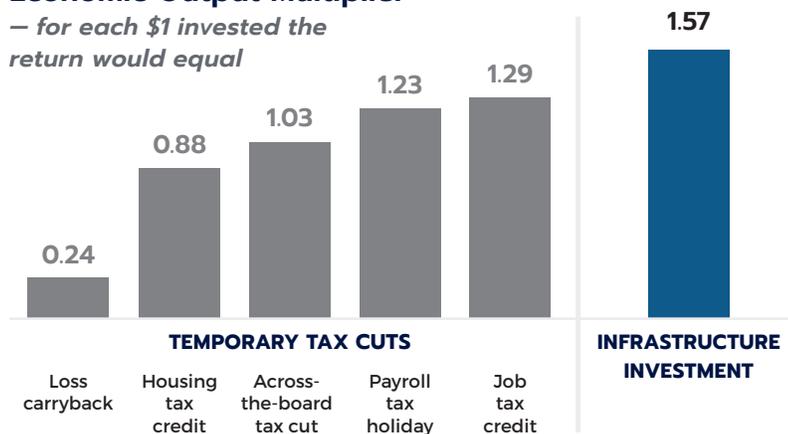

Best Action for Congress to Take

- Thousands of high priority green-lighted projects would be put back on-line immediately, employing millions of Americans across the country.
- GDP would increase by \$3.15 trillion and over 21 million jobs would be created with a \$2.1 trillion investment, according to the Economic Policy Institute study.¹
- The U.S. is 30 years behind on its infrastructure, getting a grade of D+ from Civil Engineers.^{2,5}
- Strong bi-partisan and stakeholder consensus that vital needs exist and action must be taken.

The short and long-term impacts are enormous.

Economic Output Multiplier

— for each \$1 invested the return would equal

What \$2.1 Trillion in Infrastructure Could Mean for the U.S. Economy

- A Bigger Pie**
\$5.7 trillion more in U.S. economic activity, 10 times recession losses
- Faster Rebound**
GDP back to pre-crisis levels in four quarters, not seven
- Big Investment Return**
For each dollar spent, the return is \$2.70
- Lift Off**
Productivity up an extra 0.3% per year with an average potential growth to 2.2% from 1.7%
- People at Work**
2.3 million jobs added by 2024
- Economic Rise**
Economy creates 713,000 more jobs by 2029
- Bigger Paychecks**
Average wages up 35 basis points per year
- Income rises**
Personal income grows \$2,400 by 2029
- Money to Spend**
Households spend \$3.5 trillion more over 10 years

Restart & Grow Our Economy

COVID-19 has caused thousands of green-lighted state and local projects to be shelved or postponed indefinitely. Infrastructure investment can get these critical projects back on track.

PRE-COVID-19

Trillions Needed to Maintain Current Infrastructure

- U.S. infrastructure investment needs are estimated at **\$4.7 Trillion+** to keep pace with current GDP, according to the OECD and WEF.²
- In 2017, the American Society of Civil Engineers rated America's infrastructure as a D+ and anticipated a **\$3.9 trillion loss in GDP by 2025** due to the lack of funding.³

POST-COVID-19

Infrastructure Crisis: High-Priority Green-Lighted Projects Can Start Immediately Creating Jobs

- There are a significant decrease in state motor fuel tax and toll receipts as vehicle traffic **declined by 50% in most of the country.**⁶
- Most states will face an estimated 30% decline in transportation revenue during the next 18 months, with some as high as 45%.⁴
- Rural and urban departments of transportation are severely impacted and need assistance to get projects moving again.

Job Loss and Economic Impact: GDP and Construction Sector Jobs Hit Hard

- The construction industry **lost 975,000 jobs in April**, the worst one-month decline in history, according to the Associated General Contractor's survey.⁵
- 67% of firms report having a project canceled or delayed since the start of the outbreak.

Federal action is needed to get stalled and canceled infrastructure projects back on track.

We could add \$5.7 trillion to the U.S. economy in the next decade and create over 2.3 million jobs by 2024 with a \$2.1 trillion investment in public infrastructure over a 10-year period.⁶
